Docket No.: AAO-256

In the Claims

1. (currently amended) An apparatus for supplying as oxygen therapeutic gas, comprising:

a cylinder for containing a pressurized oxygen therapeutic gas;

a nasal cannula, adapted to be introduced into a nasal passage of a patient;

a conduit extending between the cylinder and the nasal cannula for directing the oxygen therapeutic gas to the nasal cannula from the cylinder;

a valve, provided on the conduit, for allowing and blocking the fluid communication between the cylinder and the nasal cannula;

a pressure sensor, provided on the conduit downstream of the valve, for detecting the pressure in the conduit;

an orifice, provided on the conduit upstream of the valve, for regulating pressure in the conduit upstream of the valve; and

a controller for controlling the operation of the valve in synchronization with respiration of a patient based on changes in pressure detected by the pressure sensor, the controller comparing respiratory frequency with a threshold to increase volume of the oxygen therapeutic gas for each respiration in step when the respiratory frequency is larger than the threshold.

2. (cancelled)

- 3. (original) An apparatus according to claim 1, wherein the valve is a solenoid operated valve having a solenoid, and the controller controls the solenoid to open the valve for a time period sufficient for a volume of the oxygen therapeutic gas to flow therethrough for each respiration.
- 4. (original) An apparatus according to claim 1, wherein the pressure sensor is an electric capacitor type pressure sensor having a capacitor of which the electrostatic capacitance represents the detected pressure.
- 5. (original) An apparatus according to claim 1, wherein the controller determines the initiation of each respiration by monitoring the changes in the pressure detected by the pressure sensor.
- 6. (original) An apparatus according to claim 5, wherein the controller calculates the respiratory frequency by measuring the time interval between the initiations of sequential respirations.
